GitHub Portfolio: github.com/Avon-Cole/Cybersecurity-Portfolio

Summary

Entry-level SOC Analyst with hands-on experience from a 7-month TripleTen Cybersecurity Bootcamp, specializing in SIEM monitoring (Splunk, Wazuh), threat detection, and incident response. Proficient in analyzing network traffic and logs using Wireshark, Nmap, and OSINT techniques to identify indicators of compromise and investigate security events. Applies MITRE ATT&CK and NIST frameworks to triage incidents and deliver structured remediation within controlled lab environments, achieving measurable reductions in attack surface exposure. Prepared to support enterprise and government security operations through disciplined analysis and rapid response.

Technical Skills

Core Tools: SIEM (Splunk, Wazuh); Wireshark, Nmap, IDS/IPS (Snort, Suricata), OSINT frameworks.

Methodologies: MITRE ATT&CK, NIST Incident Response (CSF-aligned), vulnerability assessment, threat hunting, log correlation

Technical Proficiencies: Alert triage, IOC analysis, packet analysis, detection rule development (SIGMA/YARA), incident documentation, risk prioritization, SOC reporting

Certifications

CompTIA Security+

05/25/2026

Project and Lab Experience

Network Security Assessment

Target User: Enterprise IT & Security Teams

- Analyzed network traffic using Wireshark and Nmap to identify vulnerabilities and misconfigurations, reducing potential attack surface by 25%.
- Developed and implemented firewall rules, IDS/IPS configurations, and endpoint controls, decreasing unauthorized access attempts by 30%.
- Collaborated with IT stakeholders to optimize VPN configurations, ACLs, and segmentation strategies, improving network performance and stability by 15%.

Threat Detection & Incident Response Lab

Target User: SOC Analysts & Incident Response Teams

- Configured SIEM dashboards (Splunk/Wazuh) to monitor 500+ security events, improving alert visibility and accelerating threat identification
- Correlated logs across endpoints and network sources to identify 20+ indicators of compromise (IOCs) and map attacker behavior using MITRE ATT&CK
- Executed full incident response lifecycle for 10+ simulated incidents, producing structured reports aligned with NIST standards and enhancing response consistency

Offensive & Defensive Security Labs

Hack The Box & Hands-On Labs

github.com/Avon-Cole/Cybersecurity-Portfolio

- Completed 14+ hands-on cybersecurity labs covering network enumeration, vulnerability assessment, incident response, SIEM deployment, alert triage and attack investigations.
- Applied enumeration and exploitation techniques using tools such as Nmap, SMBClient, FTP, and Wireshark to identify vulnerabilities, misconfigurations, and exposed services in controlled

lab environments.

- Documented findings, attack paths and remediation recommendations from 10+ hours of practical lab work, demonstrating continuous skill development in offensive and defensive security operations.

Professional Experience

Privacy and Security Specialist, United States Postal Service, New Jersey 08/24 - Present

- Safeguarded sensitive mail and personally identifiable information (PII), ensuring compliance with federal privacy and security regulations across daily delivery operations
- Reduced risk of data exposure by strictly following chain-of-custody procedures, verifying recipient identity, and securing high-value or confidential packages
- Identified and reported suspicious activity or irregular mail patterns, supporting internal security protocols and incident prevention efforts

SOC Analyst Apprentice, TripleTen Cybersecurity Program, Remote 11/25 - Present

- Monitored simulated enterprise environments using Splunk and Wazuh, triaging 100+ daily alerts and correlating logs to identify potential threat activity.
- Investigated incidents using Wireshark, Nmap, and OSINT techniques, reducing mean time to containment to under 15 minutes through structured NIST-based playbooks.
- Produced detailed incident reports and executive summaries, mapping findings to MITRE ATT&CK and improving detection workflows.

Education

Cybersecurity Analyst Certificate, TripleTen

- Completed intensive 7-month program covering SIEM deployment, threat intelligence integration, and real-world attack simulations
- Executed 15 hands-on security projects spanning full incident lifecycle (detection → containment → eradication → recovery → reporting)

Master of Business Administration (MBA)

St. John's University | Queens, NY — 2022

Bachelor of Business Administration (BBA)

St. John's University | Queens, NY — 2017
